Dementia is a neurological condition that is projected to cause 1.4 million deaths by 2030 in WPR countries. In this webinar we will share the experiences of Japan and the Republic of Korea in tackling the challenge of dementia over the past decades, including the innovative approaches/solutions adopted by the two countries. The aim of the webinar is to help other WPR countries to “envision their futures” with regards to dementia, and “backcast” from these futures, emphasizing innovative solutions and leapfrogging.
